Earthy Thursday

As pressure mounts on fleet maintenance and service shops to address new, more stringent environmental requirements, this is shaping up to be the era of the “green” vehicle lift.

While municipalities, trucking companies, fleet operators and bus lines strive to contain costs, enhance efficiency and address environmental mandates, an increasing number are going “green” – an approach that can benefit both the environment and the bottom line. What’s more, the opportunity to go green and reduce costs extends beyond the realm of vehicles driven and structures to house them all the way to the equipment used to service them.

“Green” Vehicle Lifts from Stertil-Koni

Stertil-Koni has multiple heavy duty vehicle lifts to help the industry go green!

- EARTHLIFT™, a powerful mobile column lifting system with a lifting capacity of 18,500 lbs. per column, is the industry’s first hydraulic “green” mobile column. Designed with both performance and the environment in mind, its columns are made with components that are 98% recyclable and the Active Energy Retrieval System allows operators to achieve 35% more lifting cycles at maximum lifting load.

Earthy Thursday

ECOLIFT™, the industry's original ultra-shallow, full-rise in-ground axle engaging scissor-style lift, uniquely combines high pressure, low volume hydraulics and only requires 3.5 gallons of fluid per scissor. With an installation depth of just 34 inches, all key components are located above ground for easy access and environmental friendliness. ECOLIFT ensures sizeable cost savings on construction and installation and is increasingly utilized in existing workshop pits and even at locations with a high water table.

ALI/ ETL Certified

- DIAMOND LIFT™ is a full rise, telescopic in-ground piston lift -- engineered to capture the best of an old-world lifting approach and then integrate modern materials and the latest engineering for optimal performance, flexibility and safety. DIAMOND LIFT's piston rods are hard-chrome plated for maximum protection against corrosion and wear and DIAMOND LIFT, which has a total lifting capacity of up to 96,000 lbs., utilizes biodegradable oil. The upper portion of the steel containment is hot galvanized, which provides corrosion resistance at floor level. In addition, the containments are coated internally and externally with DiamondGuard, safeguarding against corrosion and electrolysis while simultaneously prohibiting hazardous shop fluids from entering the environment.
