Free-Wheel Lifting Friday

In many maintenance shops, lifting wheels-free is a must.

That's why the vehicle lift industry has engineered multiple, safe options to address this important requirement.

Today, state-of-the-art wheels free lifts commonly include piston lifts and scissor-style lifts – offering tremendous productivity, flexibility, durability and environmental containment. Many users also use support stands, which are regularly used to support raised trucks and buses. Used in sets of 4, 6 or 8, support stands can be placed under a level raised vehicle, at the point designated by the vehicle manufacturer.

Wheels-Free Lifting from Stertil-Koni

Stertil-Koni has multiple options for heavy-duty wheels-free lifting:

- **ECOLIFT™**, a U.S. patented ultra-shallow, full-rise in-ground axle engaging scissor-style lift, combines high pressure, low volume hydraulics and only requires 3.5 gallons of fluid per scissor. With an installation depth of just 34 inches, all key components are located above ground for easy access and environmental friendliness. ECOLIFT ensures sizeable cost savings on construction and installation and is increasingly utilized in existing workshop pits and even at locations with a high water table.

Free-Wheel Lifting Friday

DIAMOND LIFT™ is a full rise, telescopic in-ground piston lift -- engineered for optimal performance, flexibility and safety. DIAMOND LIFT's piston rods are hard-chrome plated for maximum protection against corrosion and wear and DIAMOND LIFT, which has a total lifting capacity of up to 96,000 lbs., utilizes biodegradable oil.

The containments are coated internally and externally with DiamondGuard, protecting against corrosion and electrolysis while simultaneously prohibiting hazardous shop fluids from entering the environment.
